

Shreeraj Pawar

shreeraj.pawar99@gmail.com | [linkedin.com/in/shreepawar](https://www.linkedin.com/in/shreepawar) | [Portfolio](#) | New York, NY

SKILLS

Languages: Python, Java, SQL, GoLang, TypeScript, JavaScript

Technologies: AWS, Spark, PostgreSQL, MySQL, MongoDB, InfluxDB, Parquet, Linux, Docker, Kubernetes, Terraform, Git, GitHub Actions, Grafana, Loki, Prometheus

Frameworks & Tools: REST APIs, Spring Boot, JUnit, Pandas, React.js, React Native, Node.js, Express.js, TailwindCSS

WORK EXPERIENCE

Humatics — Software Engineer

Boston, MA | Mar 2024 - Present

- Owned development and QA of a real-time **IoT** monitoring dashboard serving multiple customers, scaling to 100+ concurrent devices, cutting UI response times from 80ms to 16ms through data structure and rendering optimizations.
- Created a **GPT-4.5**-based AI chatbot integrated with **AWS Batch** and **AWS Athena**, building automated workflows to enable self-service operational data exploration through conversational queries.
- Built **REST APIs** and asynchronous backend data processing pipelines enabling on-demand recomputation of historical data over arbitrary date ranges.
- Built an end-to-end SMS and email notification pipeline using **AWS Lambda** and SNS, with configurable recipient groups.
- Built a sensor data **ETL** pipeline computing key KPIs from **Parquet**-backed datasets, with **S3** artifact versioning and visualization on customer-facing analytics dashboards.
- Reduced data query time from **InfluxDB** time-series database by 60% leveraging parallel queries, and added a process-level logger; also leveraged **Grafana**, **Loki**, and **Prometheus** for log exploration and monitoring.
- Validated data integrity across a sensor hardware migration through statistical comparison of multi-week field datasets, surfacing a critical timing bug in the core data library before it reached production.
- Reduced operational risk and automated software deployments by creating per-PR deployable sandbox environments using **AWS CDK** (Infrastructure as Code) and **GitHub Actions** testing loops, increasing team deployment velocity by 35%.

Treklit — Founding Software Engineer

New York, NY | Jul 2023 - Mar 2024

- Joined as the first engineer, solo developing a cross-platform mobile application with 15+ screens for travel itinerary and expense management using **React Native**, **Expo**, and **Firebase**.
- Designed system architecture, API endpoints, and core system logic; actively involved in interviewing and expanding the team.
- Integrated **GPT-3.5** to build a conversational AI feature for personalized itinerary generation, handling API integration and frontend chat UI.

IpserLabs — Software Development Intern

Mountain View, CA | Feb 2023 - May 2023

- Built secure login and enterprise authentication systems in **Java**, implementing session management, Object-Oriented Programming (OOP) principles, and secure access control.
- Integrated web crawling services to populate a **PostgreSQL** relational database for downstream application use.
- Designed and developed responsive web pages and dashboard functionality using **React.js**, **D3.js**, and **TailwindCSS**.

IpserLabs — Software Development Intern

Mountain View, CA | Jun 2022 - Aug 2022

- Developed **RESTful** backend services and microservices with **Node.js**, **Express**, and **MySQL** for an e-commerce platform; integrated Stripe API for third-party payment integrations.
- Migrated a legacy monolithic codebase to **React.js** and **TailwindCSS**, improving maintainability and developer velocity.

PROJECTS

Distributed FinTech Ledger | Kubernetes Architecture

June 2026 - July 2026

- Engineered a high-throughput **Go** order matching engine and ACID-compliant **PostgreSQL** ledger using **Redis Streams** for fault tolerance, deploying the microservices to a **Terraform**-provisioned **Kubernetes** cluster monitored via **Prometheus** and **Grafana**.

K-12 School Shooting EDA

Nov 2022 - Dec 2022

- Performed data cleaning, transformation, analysis, and visualization using **D3.js** to uncover insights, and presented actionable recommendations to contribute to informed decision-making processes.

Music Industry Analysis with Spotify

Mar 2022 - Apr 2022

- Analyzed global pre- and post-pandemic trends using **PySpark** and **Spark SQL**, performed data gathering, cleaning, exploratory data analysis, and visualization using **SeaBorn**, **Plotly**, and **Matplotlib**, and containerized the workflow using **Docker**.

EDUCATION

New York University — Master of Science in Computer Science

New York, NY | Sep 2021 - May 2023

University of Mumbai — Bachelor of Engineering in Computer Engineering

Mumbai, India | Aug 2017 - Jun 2021
